location: Mexico

About me

I'm a computer systems engineer with 11 years of experience building end-to-end products: from domain design and Rails APIs to observability, security and AWS deployments. I specialize in turning complex requirements into maintainable, documented software that's ready to scale.

Areas of expertise

- **Dynamic architectures and rules:** I built gems like PiThreePls and rule engines (JSON) to transform third-party payloads, map statuses and build responses/notifications fully configurable per company.
- **Integrations and automation:** bidirectional webhooks, jobs with retries, HTTP notifications (HTTParty), and WhatsApp/ManyChat integration for interactive flows (booking search/editing, guided selection, multi-language).
- **Multi-role SaaS and monetization:** two-level referrals, licenses, matching bonuses, points distribution, an internal wiki with workflows and search (pg_trgm/unaccent), and email templates (SES).
- **Quality and security:** RSpec (POROs, services, controllers), RuboCop, rate limiting with Rack::Attack, IP/user blacklists, IP-based confirmations (Devise), reCAPTCHA/WAF and Pundit policies.
- **DevOps & Data:** AWS (EC2, S3, SES, ALB, Route 53), NGINX, Docker, CI/CD, autoscaling; Postgres + indexes/search, MongoDB (pipelines/aggregations), Redis (queues, caching).

Highlights

projects/pibox

Pibox · B2B logistics

Corporate booking platform with per-company rules, real-time status/position notifications and anti-abuse (Rack::Attack).

→ `Results:` less integration friction, better traceability and time-to-market.

projects/feriapay

FeriaPay · Multi-role SaaS

Two-level referrals, licenses and dynamic commissions; a wiki with Tango-style workflows and search; onboarding and communications with SES.

→ `Results:` more predictable operations and faster team enablement.

projects/bodorrio

Bodorrio · Events

End-to-end management (guests, vendors, transactions, S3 media) with authentication/authorization and optimized visual sections.

→ `Results:` a clear operational flow and consistent UX.

Employment

2026 – present	**Rankmi** · Full-Stack Developer (Rails · React)
2023 – 2026	**Picap** · Ruby on Rails Developer
2022 – 2023	**TokenizeMarketplace** · Ruby on Rails Developer
2021 – 2022	**Batched** · Ruby on Rails Developer
2019 – 2020	**Uulala** · Server Administrator / FullStack Developer
2018 – 2019	**EasyMePresta** · Server Administrator / FullStack Developer
2017 – 2018	**Metricas SAPI de CV.** · FullStack Developer
2016 – 2017	**OPENCAP** · FullStack Developer
2015 – 2016	**Dirección General de Centro de Formación para el Trabajo (DGCFT)** · Developer BackEnd
